

Patent claims

1 1. A door closer having a housing for accommodating a closing mechanism,
2 the housing being provided with attaching flanges, wherein attachment holes are
3 provided for attachment components penetrating therethrough, characterized in that
4 three attachment holes (10) are disposed in each attaching flange (8, 9).

1 2. A door closer according to claim 1, characterized in that the attaching
2 flanges (8, 9) are disposed at the end surfaces of the housing (1).

1 3. A door closer according to the preceding claims, characterized in that the
2 attachment holes (10) are equally distanced from each other.

1 4. A door closer according to the preceding claims, characterized in that the
2 attachment holes (10) are aligned with each other.

1 5. A door closer according to the preceding claims, characterized in that the
2 central attachment hole (10) is located in the longitudinal centre plane (11) of the
3 housing (1).

- 1 6. A door closer according to the preceding claims, characterized in that the
2 two exterior attachment holes (10) are located in the area of the exterior longitudinal
3 edges of the housing (1).
